SUMMARY

Computer Engineering student at ESPRIT specializing in Cloud Computing, with hands-on experience in cloud infrastructure, CI/CD automation, backend development, and machine learning. Skilled in Docker, Kubernetes, OpenStack, Terraform, and building cloud-native applications end-to-end. Seeking a 6-month end-of-studies internship starting February 2027.

EDUCATION

ESPRIT, Tunis, Tunisia — Computer Engineering | 2022 – Present
Relevant areas: Cloud Computing, Software Engineering, Distributed Systems, DevOps, Computer Networks, Databases, Machine Learning

EXPERIENCE

- Cloud DevOps Intern — FelCloud, Tunis, Tunisia | 07/2026 – 08/2026
- Deployed and configured Zuul as a CI/CD gating system on OpenStack infrastructure, automating validation workflows for GitLab repositories.
 - Integrated Zuul with GitLab merge requests and implemented automated check, gate, and post pipelines for pre-integration testing.
- AI Intern — Intech Solutions, Tunis, Tunisia | 07/2025 – 08/2025
- Developed an AI-powered psychometric assessment platform, transforming raw assessment responses into structured candidate insights.
 - Designed automated data-analysis workflows and integrated AI modules into an existing software product.
- Backend Development Intern — Intech Solutions, Tunis, Tunisia | 08/2023 – 09/2023
- Developed backend functionality using Django, including authentication and a travel-agency management module.

PROJECTS

- Fullstack — Intelligent Startup Platform | 03/2026 – 04/2026
- Architected and shipped a full-stack, cloud-native SaaS platform (Angular, Spring Boot, MySQL) covering frontend, backend, database, and deployment as a distributed system.
 - Self-managed the entire infrastructure on OpenStack using Docker, Kubernetes, and CI/CD pipelines to automate delivery, with Prometheus/Grafana observability for production monitoring.
- StackPilot — Cloud Infrastructure DevOps | 11/2025 – 02/2026
- Designed and automated a private cloud environment on OpenStack with Terraform and Ansible, creating a reusable infrastructure-as-code foundation for deploying cloud-native applications.
 - Orchestrated container deployment with Kubernetes and integrated an agent workflow with an LLM to provision cloud stacks from natural-language input; used the platform to host FoundersLab end to end.
- AutoMate — AI Calculator System | 11/2025 – 12/2025
- Built a real-time machine learning API (Python, Flask) for automated vehicle valuation, evaluating and comparing regression models including XGBoost and Random Forest to select the best performer.
 - Built and connected a Next.js frontend via REST APIs to visualize predictions, then deployed the full application to Vercel.
- FITSYNC — Sports Management Platform | 01/2025 – 05/2025
- Developed a sports management platform (Java, Symphony, JavaFX, HTML/CSS/Bootstrap) with modules for tournament, team, and athlete performance management, from backend logic to UI design.

TECHNICAL SKILLS

Cloud: Docker, Kubernetes, OpenStack, Terraform, Ansible, CI/CD, GitLab, Zuul, Linux, Prometheus, Grafana — infrastructure automation, orchestration, and observability
Backend: APIs, Spring Boot, Flask, Django, REST APIs, Microservices, Java, Python, Node.js — distributed, production-oriented backend systems
Frontend: Angular, Next.js, JavaFX, HTML, CSS, Bootstrap
AI: Machine Learning, Regression, Clustering, Decision Trees, Pandas, NumPy, AI application integration
Programming: Python, Java, JavaScript, PHP, SQL
Databases: MySQL, Oracle

LEADERSHIP

IEEE RAS ESPRIT Student Body — Active member for 4 years, holding multiple leadership positions, including Media Manager (2023 – 2024): led digital communication and social media content for technical events and student activities, and collaborated with student teams to grow visibility around technical initiatives.

LANGUAGES

Arabic (Native) | French (B2) | English (B2)
