SUMMARY

Cloud Computing engineering student who has deployed a private OpenStack cloud from scratch and shipped a SaaS platform on it end-to-end — provisioning (Terraform, Ansible), orchestration (Kubernetes), CI/CD, and observability (Prometheus, Grafana). Builds full-stack products (Angular/Next.js, Spring Boot/Django/Flask) with integrated ML components.

EXPERIENCE

- Intech Solutions, AI Intern**07/2025 – 08/2025
 - Built automated AI-driven scoring pipelines for psychometric candidate evaluation, replacing manual review with a Python-based analysis workflow.
 - Designed and validated end-to-end analysis pipelines, integrating multiple AI modules into the platform's evaluation engine.
 - Structured the AI module codebase with version-controlled (Git) workflows to support integration into the existing platform architecture.
- Intech Solutions, Web Development Intern**08/2023 – 09/2023
 - Developed backend features and REST APIs in Django, extending the platform's core server-side functionality.
 - Implemented authentication and travel agency management modules within the existing Django application.

EDUCATION

Computer Engineering Degree, ESPRIT2022 – Present
Specialization: Cloud Computing

SKILLS

Cloud & DevOps Docker, Kubernetes, OpenStack, Terraform, Ansible, CI/CD, Git, Linux	Backend Spring Boot, Flask, Django, REST APIs	Frontend Angular, Next.js, JavaFX	Machine Learning Regression, Clustering, Decision Trees, Pandas, NumPy
Programming Languages Python, Java, JavaScript, PHP, SQL			

LANGUAGES

Arabic Native	French B2	English B2
-------------------------	---------------------	----------------------

PROJECTS

- FoundersLab, Intelligent Startup Incubation Platform**03/2026 – 04/2026
 - Developed a SaaS incubation platform using Angular, Spring Boot, and MySQL.
 - Implemented a machine learning-based startup scoring system.
 - Deployed the platform on a personal cloud infrastructure using OpenStack, Docker, and Kubernetes.
 - Implemented CI/CD pipelines, monitoring, and observability with Prometheus and Grafana.
- StackPilot, Cloud Infrastructure & DevOps**11/2025 – 02/2026
 - Deployed a private cloud infrastructure using OpenStack.
 - Automated infrastructure provisioning with Ansible, Terraform, and Kubernetes orchestration.
 - Hosted and deployed the FoundersLab platform.
- AutoMatch, AI Car Valuation System**11/2025 – 12/2025
 - Developed a real-time Machine Learning API using Flask.
 - Implemented classification, regression, and clustering models for car valuation and prediction.
 - Built a dynamic frontend using Next.js for prediction visualization.
 - Deployed the frontend on Vercel with seamless API integration.
- FITSYNC, Sports Management Platform**01/2025 – 05/2025
 - Developed a sports management platform using Java, Symfony, and JavaFX.
 - Implemented tournament, team, and athlete performance management modules.
 - Designed modern and interactive interfaces using JavaFX, HTML, CSS, and Bootstrap.

VOLUNTEER EXPERIENCE

- IEEE RAS ESPRIT SBC, Media Manager**2023 – 2024
 - Managed social media platforms and improved event visibility among students.
 - Covered workshops, competitions, and conferences through media content creation (photos, videos, highlights).
